Spring Medical Systems, a Leading Provider of EHR Software, Selects IngagePatient, the Premier Patient Engagement Platform

Adds Meaningful Use 2 Certification Features and Product Differentiation

IngagePatient, the premier mobile patient engagement platform, is integrating its comprehensive solutions platform with Spring Medical Systems, a leading Electronic Health Record (EHR) software provider offering SpringCharts. IngagePatient will extend SpringCharts' current software offering beyond the doctor's office directly into the hands of patients. The relationship will also provide Spring Medical with broader coverage for Meaningful Use Stage 2 criteria, including those related specifically to patient engagement.

"We have a tremendous relationship with Spring Medical and are excited about their enthusiasm in launching our combined fully integrated solution," stated Justin Neece, Chief Operations Officer, IngagePatient. "The combination of SpringCharts and IngagePatient creates a differentiated service that extends the reach of physicians beyond the doctor's office through mobile technology."

The partnership is in implementation mode and is in the process of a national rollout.

IngagePatient's Mobile Health solution allows providers to interact with patients outside of the clinic. Using a tablet or smart phone, including both iOS and Android, patients can access a virtual physician's office to make appointments, refill prescriptions, pay their bill and receive helpful reminders regarding appointments, referrals and care plan requirements. These features help support care plan compliance and improve patient satisfaction. In addition, staff and clinicians will benefit from the operational efficiencies of the new platform, which helps to attract new patients, retaining existing patients and reduce no-show rates.

"Rather than just meet the basics of meaningful use, we were looking to offer patients a more robust patient engagement solution with features that they access in other areas of their lives," stated Mark Benvegnu, CEO, Spring Medical Systems. "Our practices have asked us for this functionality and are very excited about the rollout."

About IngagePatient (www.ingagepatient.com)
IngagePatient, is the premier patient engagement platform that connects providers and patients at all points of care, improving health outcomes, satisfaction and practice efficiency. The company's flagship offering supports a wide variety of specialty and primary care practices and patients across the United States. IngagePatient is sold directly to providers and health systems as well as through exclusive partnerships with EHR, Practice Management and Revenue Cycle Management companies. IngagePatient is a secure HIPAA compliant, web-based advanced patient engagement platform with an expansive set of features including a customizable eRegistration capability, flexible appointment reminders and care plan, medication refills alerts, integrated education delivery, eReferral capabilities, a robust personal health record, ePrescription refills requests, a practice Facebook web presence, a remote patient check-in capability and push population health management alerts. The platform is supported on both mobile and desktop devices and includes a full-featured patient mobile App. IngagePatient is a 2014 Edition Meaningful Use Stage 2 Modular certified platform with 20 criteria.

About Spring Medical Systems
Spring Medical Systems, Inc., was founded by a team of physicians and technology professionals with the primary goal of developing easy-to-use software solutions that empower physicians to increase efficiency,

reduce costs, and provide better patient care. The Company's flagship offering is the SpringCharts® family of products. These innovative solutions combine the right mix of rich functionality, intuitive ease of use, and affordability needed to enable rapid and complete documentation with a minimum of cost and disruption. Now in use by thousands of physicians in a variety of medical specialties, SpringCharts products provide complete solutions for independent medical offices.
