

IngagePatient Succeeds in Adding 2014 Edition Meaningful Use Stage 2 Criteria

Adds 5 Criteria for a Total of 25 – Most Comprehensive Patient Engagement Solution

IngagePatient, the premier patient engagement platform, adds 5 Meaningful Use Stage 2 criteria making it the first patient engagement solution to be certified for 25 criteria required for Meaningful Use Stage 2 (MU2) modular certification.

The certification, received from Drummond Group, Inc., demonstrates that IngagePatient has the most comprehensive patient engagement platform available, providing the functionality and security necessary to support physician practices in meeting requirements for MU2. With the addition of meaningful use core objectives specific to patient engagement, IngagePatient will lead the market in providing a certified and industry leading solution that extends the point of care to where patients live, work, and play.

In September 2013, the company obtained Office of the National Coordinator for Health Information Technology (ONC)-certified Ambulatory EHR module designation for 20 of the 2014 Edition's criteria.

“It was important to complete the MU2 criteria specific to both provider and patient care coordination,” says Jana Jones, chief executive officer for IngagePatient. “Providing self-service tools on a website is one small step for patient engagement. Our goal has always been to provide the connectivity to coordinate and synchronize care at the right time and place by the right provider.”

IngagePatient's certification, received from Drummond Group, Inc., is 2014 Edition compliant and has been certified by an ONC-ACB in accordance with the applicable certification criteria adopted by the Secretary of the U.S. Department of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.

IngagePatient is certified for these additional modular EHR criteria:

- 170.314.a.15 Patient-Specific Education Resources
- 170.314.b.1 Transitions of Care Receive, Display, and Incorporate
- 170.314.b.2 Transitions of Care - Create and Transmit
- 170.314.b.7 Data Portability
- 170.314.e.1 View, download and transmit

For more information regarding the initial 20 criteria certified in 2013 please see ([link to MU2](#))

About IngagePatient (www.ingagepatient.com)

IngagePatient is the premier patient engagement platform that connects providers and patients at all points of care, improving health outcomes, satisfaction and practice efficiency. The company's flagship offering supports a wide variety of specialty and primary care practices and patients across the United States. IngagePatient is sold directly to providers and health systems as well as through exclusive partnerships with EHR, Practice Management and Revenue Cycle Management companies. IngagePatient is a secure HIPAA compliant, web-based advanced patient engagement platform with an expansive set of features including a customizable

eRegistration capability, flexible appointment reminders and care plan, medication refills alerts, integrated education delivery, eReferral capabilities, a robust personal health record, ePrescription refills requests, a practice Facebook web presence, a remote patient check-in capability and push population health management alerts. The platform is supported on both mobile and desktop devices and includes a full-featured patient mobile App. IngagePatient is a 2014 Edition Meaningful Use Stage 2 Modular certified platform with 20 criteria.
